

Security

I have had to take a slight hiatus due to security concerns over this blog. I have a non-standard install and that doesn't help any at all in trying to secure things. However, in checking the normal security items, the blog seems pretty secure. Nonetheless, someone created some strange links to posts that I could not quite figure out what they were doing, or why.

So, hours were spent trying to learn everything I could about php hacks, SQL injections, and WordPress security issues. Hence, no articles were posted and little to no work was done on the rest of the websites. I would hate to think that I would have to create a virtual Fort Knox to simply publish on the web without constantly fighting intrusions. However, that is a sign of the world we live in. There are far too many people who delight in creating evil. After all, there is really no point in hacking a blog. There is no point in spreading spam everywhere either. Yet, individuals insist upon doing those very things.

Anyway, things should return to a more normal schedule this week.
